LIGHT RIDER - THE PRO DJ LIGHTING APP

Light Rider is a new app for iPad, Android and Amazon Fire tablet which lets you control your DMX lights without the need for programming. The app is compatible with any DMX lighting fixture and includes an ever-growing library of over 15,000 fixture personality profiles.

Developed by the Nicolaudie Group with over 25 years of DMX lighting control experience, Light Rider puts a professional light show into the hands of a working DJ, who might not have the time for programming scenes before a show. Carefully crafted by Light Rider's developers and DJs - Move FX are on the left, Color FX on the right, Flash FX in the middle and presets along the bottom. Ride FX live with the speed, fade, fan, size and shift controls. Sync with the music using audio Pulse analysis, Beat Tap or Ableton Link.

Available for free on the App Store, Amazon and Google Play. Light Rider can be used with any Nicolaudie Group USB-DMX interface with Android, or via any Art-Net device over WiFi with Android/iPad. Art-Net is available for free, but an add-on will need to be purchased after 2017. A Light Rider WiFi DMX device will be available in 2018. For more information, please contact us at the address above. We will be demonstrating this product at PLASA, BPM and LDI 2017.
